

Data Science

CAREER OBJECTIVE

Passionate about Computer Science and Data Science, I thrive on extracting insights from data and solving complex problems through data analysis and interpretation. I aim to build a career where I can leverage my analytical skills, enhance my technical expertise, and contribute to data-driven decision-making. Seeking a dynamic role that offers continuous learning, professional growth, and opportunities to innovate in the world of data.

EDUCATION

Indrashil University

09-2022 - Present

B.tech in Computer Science Engineering

SKILLS

- Excel - Data wrangling, ETL, Data Visualization
 - SQL - Database management, Descriptive analysis
 - Statistics - Find Outliers, replace null values, Hypothesis testing
 - Tableau - Data visualization
 - Python - Core python and oops concepts
 - Python libraries - NumPy , Pandas, Matplotlib, Seaborn
 - ML
 - Teamwork
 - Learning from others
 - Problem solving
-

CERTIFIED COURSE

Tops Technologies

Data Science

Pursuing

PROJECTS

Customer Segmentation Analysis(Excel)

Performed an Analysis in the E-commerce domain to understand customer behavior, preferences, and purchase patterns. Analyzed online retail transaction data using Excel, leveraging Power Query Editor and Pivot Tables for data cleaning and analysis. Segmented customers based on demographics, purchasing behavior, and engagement. Created an interactive dashboard for clear visualization and allow us to get more useful insights.

laptop dataset queries(SQL)

Used SQL to analyze a laptop dataset, performing data cleaning, transformation, and trend analysis. Renamed and converted columns for consistency, extracted insights on top-priced laptops, brand trends, and specifications, and conducted price-performance evaluations. Applied sorting, filtering, and aggregation queries to support E-commerce and retail decision-making.
